

The role of IT tools in energy efficiency policies

Timo Liederer, MSc. , Austrian Energy Agency

July 21st 2021

This project has received funding from the European Union's Horizon 2020 Research and innovation programme under grant agreement No 840034. This document only reflects the authors' views and EASME is not responsible for any use that may be made of the information it contains.

IT tools should:

- simplify data collection (OP & administration)
- reduce costs (administrative burden)
- data security
- possibility of analysis
- automate the monitoring process

IT tools are useful when there is:

- high number of reporting parties
- lack of expertise
- need for analysis
- need for automation for monitoring

- plan ahead!
- define data collection process
- define monitoring & verification process
- data security
- possibilities of analysis

- don't underestimate the costs
- changes are expensive and not always possible
- good planning is key
